

City of Santa Barbara
Airport Department

Memorandum

DATE: March 19, 2014
TO: Airport Commission
FROM: Hazel Johns, Acting Airport Director 
SUBJECT: 2013 Integrated Pest Management Annual Report

Recommendation:

That Airport Commission recommend that City Council accept the Santa Barbara Integrated Pest Management Strategy, 2013 Annual Report, dated March 2014.

Background:

The City of Santa Barbara adopted an Integrated Pest Management (IPM) strategy in January 2004 to reduce the amount and toxicity of pesticides used by the City and, where feasible, to eliminate pesticide use in public areas using alternative methods. This report, marking the tenth year of the program, highlights the Airport portions of the attached 2013 IPM Annual Report.

In early 2006, the City adopted the Pesticide Hazard and Exposure Reduction (PHAER) Zone model. In that model, areas of the Airport were mapped based on potential human and environmental pesticide hazard and exposure risk, as green, yellow or special circumstance (red) zones. Accordingly pest control products were evaluated on a range of human and environmental toxicity measures and rated as green, yellow or special circumstance (red). On a continuum, green products have low human and environmental toxicity, while there is high concern over the human and/or environmental toxicity traits associated with special circumstance (red) products. The model informs an applicator of the appropriate type of product to use in a specific area of the City.

Alternatives Used:

- Alternative efforts focused on the control of weeds through mechanical methods, including string trimming and hand weeding. 1,168.1 hours of alternative weed control efforts were documented in 2013 by the Airport.
- 116.5 hours were spent using mechanical steel traps to control rodents
- Contractors also removed bee hives from several Airport properties, in lieu of lethal control methods.

Airport Department Pesticide Use:

Airport pesticide applications concentrated on two types of pests in 2013: mosquitoes and weeds. In addition to the three pests identified above Airport used .031 lbs of Advion gel, in bait stations to control ants in Airport buildings.

Exemptions

Airport Department did not apply for any exemptions or use any material not on the approved materials list during 2013.

Mosquitoes

Mosquito control materials applied at the Airport is by far the single largest pesticide application in the City. During much of 2013 the Goleta Slough mouth was closed, leading to standing water over much of the Airport. The standing water created habitat for mosquitoes dramatically increasing mosquito abatement efforts and use of associated control products. This increase was forecast in last year's IPM report to the Airport Commission.

In 2013 Airport, relied primarily on Altosid, a Methoprene based, yellow, extended release larvicide and Vectobac/Vectolex, green BTI based materials to control mosquito sources in the Goleta Slough. The Mosquito and Vector Management District of Santa Barbara County monitors mosquito populations and performs control activities for the Airport to prevent transmission of West Nile Virus and other diseases.

In 2013 the Mosquito and Vector Management District applied 1,038.4 lbs of Altosid, 2,047.17 lbs of BTI based products and only 1.909 lbs of Natular XRT on the Airport's behalf, to control mosquito sources in and around the Goleta Slough.

Weeds

In addition to the manual weed control program at the Airport, staff used the yellow products Roundup ProMax and Surflan to maintain the airfield as needed for safe aircraft operations and to preserve infrastructure. Herbicides were used to prevent weeds from obscuring airfield lights and signs, and to prevent weeds from deteriorating airfield assets.

A small amount of yellow materials were also used, consistent with PHAER designations, on the Hollister Avenue traffic islands.

For 2013, Airport applied the following herbicides:

- 40.375 gallons of Roundup Promax (yellow liquid)
- 45.0 gallons of Surflan A.S. (yellow liquid)

Citywide IPM Effort Totals:

To minimize direct and indirect human health and safety hazards posed by pests at the Airport, the Department is again the major user of pesticides in the city. Airport Department used 88% of all green tier pesticides and 97% of all yellow tier pesticides applied by the city in 2013. Airport Department also contributed over 12% of the alternative effort hours that were recorded citywide.

Mosquito control efforts in the Goleta Slough that help prevent the spread of West Nile Virus account for over 88% of the pesticide units applied by the city.

2014 Strategy Changes:

For 2014 the Airport Department will seek exemptions for materials for termite tenting and gopher eradication on the airfield. The materials used to control both pests are "Special Circumstance", red designation materials. Use of substantial amounts of red category pesticides will likely appear on next year's report.

Anticipating that the Goleta Slough mouth will again close and create mosquito habitat, mosquito abatement efforts will likely continue at a level comparable to 2013 for 2014.

I. BACKGROUND

In January 2004, the City of Santa Barbara (City) adopted a City-wide Integrated Pest Management (IPM) Strategy. The City's IPM Strategy was developed to help reduce pesticide hazards on City property and promote effective pest management.

The IPM Strategy requires that an Annual Report be prepared. The Annual Report addresses each of the following areas:

- Types of pest problems that each Department has encountered
- Types and quantities of pesticides used by each Department
- Exemptions currently in place and granted during the past year
- Alternatives currently used for phased out pesticides
- Alternatives proposed for adoption within the next 12 months
- Effectiveness of any changes in practices implemented
- Planned changes to pest management practices

In addition to the areas described above, the 2013 Annual Report discusses the Pesticide Hazard And Exposure Reduction (PHAER) Zone System adopted by the City Council in February 2006. This is the eleventh Annual Report for the program.

PHAER Zone System

The IPM Strategy required the development of a "Zone System" tied to the IPM Approved Materials List to limit pesticide use based on potential human exposure. In February 2006, the City Council approved the PHAER Zone system to be incorporated into the IPM Strategy.

The PHAER Zone system assigns Green, Yellow, or a Special Circumstance/Red Zone designation to sites, or portions of sites, based upon the potential for exposure by humans and sensitive habitat to hazardous pesticides, and allows use of carefully screened materials by zone designation. For example, Green Zones are areas of high exposure potential, and only pesticides designated as "Green", which show very limited human and environmental impacts, may be used. Yellow Zones are areas with less potential for harm from exposure, and a broader range of "Yellow" materials are permitted under the PHAER Zone system.

Citizen and Staff IPM Advisory Committees

City Council established the Citizen IPM Advisory Committee by Resolution No. 06-008. The members of the Committee are appointed by the Parks and Recreation Commission to serve two-year terms. The purpose of the Committee is to review and advise on the implementation of the City's Integrated Pest Management Strategy.

In 2013, the Citizen IPM Advisory Committee met two times to discuss and act on IPM policies and practices. The 2013 Citizen IPM Advisory Committee included the following representatives:

- Greg Chittick, community at large
- Larry Saltzman, Pesticide Awareness and Alternative Coalition
- Kristen LaBonte, community at large

The Staff IPM Committee, consisting of Department IPM Coordinators, continued to work effectively with the Citizen IPM Advisory Committee to administer the IPM Strategy and oversee pest management practices.

Department IPM Coordinators are representatives appointed by Department Directors to serve on the Staff IPM Committee. Department representatives were: Jeff McKee from the Airport, Sue Gray from Community Development, Joe Poire from Fire, James Dewey from Public Works, Judd Conley from the Waterfront, and Santos Escobar from Parks and Recreation.

The Parks and Recreation Department coordinates both the Citizen and Staff IPM Committees and oversees the implementation of the City's IPM Program.

Citizen IPM Advisory Committee Actions

The Citizen IPM Advisory Committee met twice in 2013, reviewing 22 requests for exemptions, consulting with staff on current pest issues and applicable IPM practices, and approving the 2012 IPM Report.

In 2013, there were no IPM Advisory Committee dissensions. A dissension is when a vote is not unanimous.

II. 2013 PROGRAM SUMMARY

The use of Green materials increased from 1,121 units in 2012 to 2,339 units in 2013. The use of Yellow materials increased from 779 units to 1,159 units. The use of Red materials increased from 15 units to 28 units. Overall pesticide use increased from 1,915 units to 3,525 units. The majority of the overall increase is due to increased mosquito control at the Airport. The control of mosquitoes accounted for 96% of all the pesticide units used City-wide in 2013. Of the pesticide units used City-wide to control mosquitoes, 66% are Green category materials.

The table below is a summary of pesticide use for 2013, including any increase or decrease in material use from 2012. It is important to note that because pesticide use will vary from year to year, an increase or decrease from the previous year does not necessarily indicate a long-term trend. Many factors affect the amount of pesticides applied in any one year.

Department / Division	Material Use				Change from 2012
	Green	Yellow	Red	Total	
Airport Department	2049.07	1123.78	0.00	3172.85	Up 192%
Golf Division	0.99	0.53	27.67	29.19	Up 125%
Parks Division	0.15	24.05	0.00	24.20	Down 21%
Public Works Department	288.57	10.29	0.00	298.86	Down 62%
City-Wide Total	2338.78	1158.65	27.67	3525.10	Up 84%

One of the main factors that determine pest populations is rainfall. The more rain an area receives in a year, the greater the population of insects and weeds.

The graph below shows the rainfall activity for the 2013 calendar year. The total rainfall was 4.21 inches, substantially less than the 2012 rainfall of 13.82 inches. Although reduced rain, especially in spring, reduces the mosquito breeding cycle and the need for pesticides used in mosquito control, the Airport Department saw a significant increase in mosquito control. In 2013 the mouth of the Goleta Slough closed, which prevented accumulating water from draining off the Airport property. This required the Airport Department to use more materials to control mosquitoes.

2013 Rainfall Chart

III. PEST PROBLEMS ENCOUNTERED

A variety of pests were encountered on City properties in 2013 as outlined in the table below. Departments ranked their top three pest problems with the numbers 1, 2 and 3. Other pest problems encountered are checked (✓). Footnote annotations reference additional information.

Pest Problems Encountered Table

		Airport	Creeks	Golf	Parks	Parking	Public Works	Waterfront
Plant pests	Giant whitefly	✓			✓	✓	✓	
	Misc. plant insects			✓	✓ ³	3	✓	
	Disease	✓		1 ¹	✓ ⁴	✓

	Pigeons	✓				✓	✓	
	Crows	✓		✓				
	Ants	✓				✓	✓	

1. Golf reported these plant diseases (fungus): Dollar Spot, Pink Snow Mold, Anthracnose, and Yellow Patch.
2. Golf reported this invasive weed: Clover.
3. Parks reported these plant insects: Lerp Psyllids, Mites, Oak Moths, Thrips, Aphids, Snails, Slugs, and Ants.
4. Parks reported these plant diseases: Leaf Spot, Mildew, Blight, Pink Bud Rot, Sooty Mold, Pythium, Armillaria, and Phytothora.
5. Parks reported these invasive weeds: Arrundo, Nutgrass, Kikuyu Grass, Clover, Oxalis, Malva, Foxtail, Spurge, Dandelion, Milkweed, Sow Thistle, Poa annua, Puncture Vine, Johnson Grass, and Poison Oak.
6. Parks reported the following perennial grasses: Crab, and Bermuda.

IV. TOTAL PESTICIDE USE

Data has been collected for City-wide pesticide application under the PHAER Zone model since 2006. This data is plotted in the graphs on subsequent pages. The graphs illustrate the various reductions and increases in pesticide use by each Department. A City-wide narrative is provided as well as one for each Department describing the particular pest issues faced this year, alternatives used, exemptions requested.

There are a number of factors that affect pesticide use. These include weather patterns (unseasonably dry or wet weather), introduction of new, or changes to existing pest populations, and changes in the effectiveness or availability of pesticide materials.

As the program continues into its twelfth year, the impact of reduced reliance on pesticides, particularly herbicides, is becoming noticeable in areas, such as the weed population at Alice Keck Park Memorial Gardens and other landscape areas throughout the City. Budget and staffing levels will continue to be a challenge. Financial constraints may require a change in service levels and aesthetic expectations or a greater reliance on more cost effective traditional pesticides. However, the City is committed to the use of Green materials, so it is likely that the overall units of pesticides applied will increase. Green materials generally require higher application levels than Red or Yellow pesticides. A rise in Green material use, even though it increases the over-all pesticide use in the City, will generally mean a reduction in the application of higher risk Yellow and Red materials.

City-wide Pesticide Use

City-wide pesticide use increased in 2013, mainly due to the use of materials to manage mosquito populations at the Airport. Pesticides applied increased from 1,915 units in 2012 to 3,525 in 2013. The use of Green materials increased from 1,121 units to 2,339 units. The use of Yellow materials increased from 779 units to 1,159 units, and Red materials increased from 15 units to 28 units. The control of mosquitoes accounted for 97% of all the pesticide units used City-wide in 2013.

The table below provides a summary of the pesticides applied on City property in 2013. Pesticides are reported in either pounds or gallons depending on whether they are dry or liquid. The column labeled "Type" includes the type of pesticide applied: Insecticide, Fungicide, Herbicide, Molluscicide, and Rodenticide. The data used to generate the total overall pesticide use is based upon total units (gallons or pounds) of all materials.

City Departments who applied pesticides, or contracted with pesticide applicators, prepared monthly pesticide and alternative use reports, and participated in the preparation of this Annual Report. The monthly reports form the basis of the Annual Report and are available at the main offices of each Department.

Total Pesticide Use Table

Tier	Pesticide Name	Active Ingredient	Type	Amount of Pesticide Applied								Applications			
				Airport		Golf		Parks and Recreation		Public Works		Airport	Golf	Parks and Recreation	Public Works
				Gallons	Pounds	Gallons	Pounds	Gallons	Pounds	Gallons	Pounds				
	Acelepryn	Chlorantraniliprole	Insecticide			0.25							1

Department Totals				85.379	3087.47	26.12	3.07	24.2	0	3.13	295.73	105	31	51	54
City-wide Totals:				Gallons 138.829		Pounds 3,386.270						Applications 241			

City-wide Pesticide Use

	2007	2008	2009	2010	2011	2012	2013
Green Pounds	0.5	220	549.5	2058.2	2461.1	1105.3	2,337.64
Green Gallons	42.9	19	10	2.2	0.28	15.7	1.14
Yellow Pounds	1421.9	717.1	993.4	1485.3	693.6	673.6	1,045.56
Yellow Gallons	149	150.4	140.5	148.1	115.2	105.5	113.09
Red Pounds	30.5	16.2	656.3	281.9	3	4.6	3.07
Red Gallons	1.2	9.2	19.7	7.3	4	10.4	24.6

Parks Division Pesticide Use

Pesticide use by the Parks Division increased in 2013. The use of Green materials decreased from 16 units to .15 units due to the relative ineffectiveness of Green materials on the particular pest problem the Parks Division deals with. There was an increase in Yellow materials from 14.6 units to 24 units due to increased weed control, especially on the control of invasives in open space areas. No Red materials were used this year on any parkland.

Alternatives Used

The Parks Division performed 7,997.75 hours of alternative pest management. The Parks Division used a weed flamer on sidewalk cracks and rocky areas as well as applying 567 yards of mulch and 70 yards of biosolids in planter areas and turf. As in years past, the majority of alternative hours were in hand-weeding and hoeing, and mechanical weeding with power equipment. Weed levels continue to compound over time, causing a significant reduction in the aesthetics of many of our prime park sites.

Various other alternatives were practiced in 2013, including trapping for mice, rats, and squirrels and the continued use of worm castings and the beneficial fungus mycorrhizae. The Parks Division also continues to search for alternative herbicides in hopes of finding effective products.

This year continued to see historic levels of gopher and mole activity in the park system. The Parks Division has significantly increased gopher trapping activities to try and minimize damage to the turf and planter areas that are affected.

Exemptions

The Parks Division applied for four exemptions. Three exemption requests were made for the use of Glyphosate at Parma Park to eradicate invasive weeds. These exemptions were granted and used successfully. An exemption was requested for the use of Diphacinone at Shoreline, Leadbetter, and Chase Palm Parks for the control of squirrels. This exemption was granted but was not used.

Parks Division Pesticide Use

	2007	2008	2009	2010	2011	2012	2013
Green Pounds	0	40	0	0	0	2.5	0
Green Gallons	11.7	0	10	1.9	0	13.5	0.15
Yellow Pounds	0	34	0	0	0	0	0
Yellow Gallons	5.7	4.2	8.8	6.4	9.2	14.6	24.05
Red Pounds	0	0	0	0	0	0	0
Red Gallons	0	0	0	0	0	0	0

Golf Division Pesticide Use

The Golf Division increased its material use from 12.95 units in 2012 to 29.19 units in 2013. Although there was an increase in Red materials from 7.9 units to 27.67 units, there was a decrease in Yellow materials from 2.8 units to .5 unit and a decrease in Green Materials from 2.2 to .99. Due to a drier than normal winter the Golf Division relied on a series of fungicide applications to control several outbreaks of Dollar spot and Fusarium patch in the spring. Due to hot and humid summer the Golf Division relied on a series of fungicide applications to control several outbreaks of Antracnose, Dollar Spot and Summer Patch on the greens. Some of these diseases stayed through the fall without any rain to leach the greens. There was an increase in turf diseases leading to an increase in Red materials used. However, the Golf Division continues to implement alternative agronomic methods to control diseases and limit pesticide use. Unfortunately, extreme environmental conditions create disease outbreaks that can only be controlled with fungicides

Alternatives Used

The Golf Division worked with County of Santa Barbara's Workforce Youth Program to give youths an opportunity to acquire hands on working skills that could help them in the future. The Golf Division was given 5 youths who worked 168 hours each. The youth were certified on the use of weed eaters and edgers, most of their hours were worked on weed eating around trees and fence lines. The Golf Division benefited from this program by reducing the amount of Yellow materials. The Golf Division is looking forward to working with the youth program again this summer to hopefully lower the Yellow materials even more.

The Green materials were decreased from 2.2 units to .37 units by double mowing more often to prevent the use of primo Maxx. The Golf Division used the Green insecticide Acelepyryn for grub control on the greens.

The Golf Division continues to implement "Old World" agronomy to establish finer leaf turfgrasses. Areas of the putting surfaces that have been damaged from disease are routinely "spiked" and seeded with disease resistant bentgrass seed. These techniques coupled with the use of seaweed and compost tea will only help reduce chemical inputs at the Santa Barbara Golf Club.

Exemptions

The Golf Division applied for and received ten exemptions. The exemptions were for the fungicides Banner-Maxx, Daconil, Heritage, Medallion, Prostar, and Affirm; the insecticide Acelepyryn and the herbicide/growth regulator Proxy, Primo Maxx and Trimmer. All of the exemptions targeted the greens.

Golf Division Pesticide Use

Airport Department Pesticide Use

The Airport Department increased its pesticide use in 2013. Green material usage increased from 346.3 units in 2012 to 2,049 units in 2013. Over the same time period Yellow materials increased from 738.5 units to 1,123.8 units. Increases were due to increased need for mosquito control in the Goleta Slough. No Red materials were used in 2013. In 2013 the Airport Department pesticide applications concentrated on mosquitoes and weeds.

Mosquitoes

During the spring of 2013 the mouth of the Goleta Slough closed due to the natural movement of sand. In the past, the mouth of the Slough has been opened mechanically to facilitate drainage. As a result of the Slough mouth being closed, brackish waters were impounded, creating a long term breeding ground for mosquitoes. The Airport Department made multiple applications of large quantities of both Green and Yellow materials to control mosquito populations.

In 2013 the Mosquito and Vector Management District applied 1,038.1 lbs of Altosid, 2,047.17 lbs of Vectobac G and Vectolex CG, and 1.909 lbs of Natular on the Airport's behalf, to control mosquito sources in the Goleta Slough.

Weeds

In addition to the extensive manual weed control program at the Airport, staff used the Yellow products Roundup ProMax and Surflan AS to maintain the airfield as needed for safe aircraft operations and to preserve infrastructure. Herbicides were used to prevent weeds from obscuring airfield lights and signs, and to prevent weeds from deteriorating airfield assets. The Airport's landscape contractor used Roundup ProMax to control weeds in the traffic islands on Hollister Avenue.

Rodents

Rodents on the airfield attract predators that pose a collision hazard for aircraft. Rodents also create an FAA compliance issue by undermining and creating uneven surfaces in runway safety areas. The Airport Department is required by the FAA to maintain safety areas in a smooth, compact condition. There was no chemical rodent control at the Airport in 2013, but an application of Fumitoxin will be needed in 2014 to address increasing populations of gophers. Rodents, including gophers, mice and rats outside the airfield fence were controlled using mechanical steel traps.

Alternatives Used

Alternative efforts focused on the control of weeds with 1,168.1 hours devoted to mechanical control. Airport staff and contract staff also devoted 116.5 hours to mechanical control of gophers, mice and rats.

During the year the Airport Department used a beekeeper to remove multiple swarms of bees from the Airport. At no time during 2013 was the Airport Department forced to use pesticides to control bees, however periodically the Department may be forced to use chemical control in situations where the location of a bee swarm conflicts with human activities and potentially threatens public health.

Airport Pesticide Use

	2006	2007	2008	2009	2010	2011	2012	2013
Green Pounds	28.5	0	160	507	1,168.90	1,755.10	346.3	2,049.07
Green Gallons	42	31.2	19	9.9	0	0	0	0
Yellow Pounds	2,107.30	1,349.90	678.6	993.4	1,395.20	678.8	650.6	1,038.40
Yellow Gallons	125.6	140	137.8	128	135.6	105.1	87.9	85.379
Red Pounds	231.9	30	0	623.6	278.9	0	0	0
Red Gallons	0	0	0.75	0	0	0	0	0

Public Works Department Pesticide Use

The Public Works Department is comprised of a number of Divisions. For the purpose of this report, the Parking Division, Vector Control, Streets Division, and Facilities Maintenance Division are included.

The Public Works Department decreased its use of pesticides from 786.7 in 2012 to 298.9 in 2013. Green materials decreased from 756.5 units to 288.6 units. Yellow materials decreased from 23.1 units to 10.3 units. Red material use decreased from 7.1 to zero units.

Alternatives Used

The Parking Division used no pesticides in 2013 and continues to use alternative methods for weed control including hand-weeding and weed whipping. Weed abatement continues to require a large amount of time and effort using non-chemical methods. Alternative practices for pest management include plant replacement, worm castings, and washing off insects with water pressure.

Vector Control utilizes mechanical traps instead of rodenticide for rodent abatement. The program for 2013 consisted of 105 mechanical trap stations on State Street and 10 on Coast Village Road. The number of rodents caught by mechanical traps on State Street and Coast Village Road totaled 1,117. Alternative use hours for this effort are 278.

Vector Control used the Green material Vecto Bac G for the control of mosquitoes. With so little rain in 2013 there were fewer areas of pooled water and a lower water level in the Andrée Clark Bird Refuge. This resulted in the reduced use of mosquito control materials.

For Bee abatement, a beekeeper is utilized. A total of 40 hives were relocated in 2013.

The Facilities Maintenance Division utilized mechanical traps instead of rodenticide for rodent abatement inside City facilities. The number of rodents caught by mechanical traps at City facilities is 1,116. Alternative use hours for this effort are 342.

Exemptions:

The Public Works Department was granted six exemptions for 2013. Four were for the Yellow insecticides Advion, Arilon, Termidor, and Timbor for the control of ants and termites in buildings. These exemptions were used successfully. Two exemptions were for the Yellow herbicides Round-Up Pro Max and Surflan for the control of weeds in street medians. These exemptions were not used.

Public Works Pesticide Use

	2007	2008	2009	2010	2011	2012	2013
Green Pounds	0.5	20	32.5	889.3	706	756.5	288.57

V. EXEMPTIONS

Under the IPM Strategy and PHAER Zone system, exemptions may be granted when a pest outbreak poses an immediate threat to public health, employee safety, or will result in significant economic or environmental damage. Exemptions may be requested for one-time application or as a programmatic exemption for a single year. The exemption process is outlined in the IPM Strategy.

- Twenty-two exemptions were requested from the IPM Committee in 2013 as summarized in the table to the right and listed in the table below.
- Of the twenty-two requests approved, six were not implemented.

2013 Exemption Summary

Exemptions	Creeks	Facilities	Golf	Parks	Streets	Totals
Emergency						
Proposed	2	4	10	4	2	22
Passed	2	4	10	4	2	22
Denied						
Applied	2	4	7	3		16
Not Applied			3	1	2	6

Exemption Detail Table

Vote	Dept. / Div.	Material	Type	Type	Exemption Type	Used	Site
Passed	Creeks	Round-Up Pro Max	Herbicide		Programatic	Yes	Hidden Valley Open Space
Passed	Creeks	Polaris	Herbicide		Programatic	Yes	Hidden Valley Open Space
Passed	Facilities	Termidor	Insecticide		Programatic	Yes	Buildings
Passed	Facilities	Timbor	Insecticide		Programatic	Yes	Buildings
Passed	Facilities	Advion	Insecticide		Programatic	Yes	Buildings
Passed	Facilities	Arlon	Insecticide		Programatic	Yes	Buildings
Passed	Golf	Heritage	Fungicide		Programatic	Yes	Greens
Passed	Golf	Trimmit	Regulator		Programatic	Yes	Greens
Passed	Golf	Primo Maxx	Regulator		Programatic	Yes	Greens
Passed	Golf	Acelepryn	Fungicide		Programatic	Yes	Greens
Passed	Golf	Medallion	Fungicide		Programatic	Yes	Greens
Passed	Golf	Daconil	Fungicide		Programatic	Yes	Greens
Passed	Golf	Affirm	Fungicide		Programatic	No	Greens
Passed	Golf	Banner-Maxx	Fungicide		Programatic	Yes	Greens
Passed	Golf	Prostar	Fungicide		Programatic	No	Greens
Passed	Golf	Proxy	Regulator		Programatic	No	Greens
Passed	Parks	Round-Up Pro Max	Herbicide		Programatic	Yes	Parma Park
Passed	Parks	Round-Up Custom	Herbicide		Programatic	Yes	Parma Park
Passed	Parks	Round-Up Pro Max	Herbicide		Programatic	Yes	Parma Park
Passed	Parks	Diphacinone	Rodenticide		Programatic	No	Shoreline, Leadbetter, Chase Palm, MacKenzie Parks
Passed	Streets	Round-Up Pro Max	Herbicide		Programatic	No	Medians
Passed	Streets	Surflan	Herbicide		Programatic	No	Medians

Comparison of Exemptions for 2012 and 2013

	2012	2013
Number of Exemption Requests	15	22
Number of Exemption Requests Approved	15	22
Number of Approved Exemption Requests Applied	10	16
Number of Approved Exemption Requests Not Applied	5	6

VI. ALTERNATIVE PEST MANAGEMENT PRACTICES USED IN 2013

Non-chemical pest management alternatives used in 2013 are reviewed in the table below. The use of non-chemical IPM alternatives was emphasized over pesticide applications. Hours reported for the total year are from the *Monthly Alternative Use Reports* prepared by each Department. A check (✓) indicates the alternative was used, but time was not tracked for it. The total tracked hours for City-wide alternative practices increased from 9,713 in 2012 to 10,485 in 2013.

PEST	Alternative	Airport	Golf	Public Works	Parks	Citywide Hours
WEEDS	Mulch & wood chips	✓	✓	✓	342	342
	Weed fabric				✓	0
	Propane flame weeder				✓	0
	Hand weeding		640	181	2,154	2,975
	Weed whip	1,168	✓		4,310	5,478
	Habitat modification				✓	0
	Irrigation Mgmt.	✓	✓	✓	✓	0
	Host plants squeeze out					0
PLANT PESTS	Irrigation Mgmt.	✓	✓	✓	✓	0
	Compost tea/microbial in.		✓			0
	Enhance plant health		✓		✓	0
	Worm castings				✓	0
	Effective micro-organisms		✓			0
	Wash off plants				✓	0
	Remove plant/tree				✓	0
GOPHERS	Traps	95	✓	✓	650	745
SQUIRRELS	Traps		✓		121	121
RATS & MICE	Mechanical traps	22		620	✓	642
	Cat				✓	0
MOSQUITOES	Mosquito fish				✓	0
	Remove stagnant water				✓	0
BEES	Bee Keepers			165	✓	165
OTHER	Glue traps/roaches			18		18
	Heat Treatment			✓		0
Total Hours		1,284.5	640	983.5	7,577	10,485

Total Mulch Use

Mulch has been found to be effective in suppressing the growth of annual weeds. The table below shows the types of mulch applied for 2013.

Mulch Use Table

Yards of Mulch by Type	Creeks	Parks/Golf	Public Works	City Totals
Biosolids		70		70
Woodchips	60	609	45	714
Total Yards	60	679	45	784

Mulch Use Comparison Chart

VII. EFFECTIVENESS OF ALTERNATIVE PRACTICES IMPLEMENTED

In general, most alternative pest management practices are more labor intensive and costly, and not as effective as the use of Yellow and Red classified pesticides. However, there are occasions when a Yellow or Red material is also not effective in controlling a pest problem. While most Green materials and practices provide only moderate control of pest populations, there have been some successes. The effectiveness of alternatives for the biggest pest problems encountered is reviewed below.

- **Weeds:** A variety of alternatives are used to provide moderate effectiveness and control including: weeding, weed whipping, mulching, mowing, and a flame torch in designated safe areas. These alternatives are significantly more labor and cost intensive and not as effective as Yellow materials. Alternative food grade or EPA exempt chemicals, such as clove oil or acid based herbicides, have not proven effective. This has resulted in a notable increase in weed populations, predominantly on parkland, that continues to have a negative effect on aesthetics and landscape health.
- **Insects / Mollusks:** Results are mixed for combating insects and mollusks. For some insects, there are no known effective alternatives. Some alternatives can be very effective but expensive, such as removing non-resistant plants and replacing them with resistant varieties. However, the following alternatives have proven successful against insects and mollusks:
 - Sluggo for snails and slugs
 - Worm castings for white fly
 - Insecticidal soap for aphids
 - Neem oil as a dormant spray
 - Bti for mosquitoes
 - Acelepryn for beetles
- **Disease:** No effective alternative has been found for most diseases. Where possible, staff focuses on preventative treatments to enhance plant health. Once disease strikes, a plant may be removed and replaced with a less susceptible plant. If a plant cannot be remove, pesticides are generally required to combat the disease.
- **Gophers:** For the most part, mechanical traps are being used City-wide. Traps have been found to be moderately effective and are more expensive than rodenticides due to higher costs of purchasing, installing, monitoring, and cleaning out traps.
- **Ground Squirrels:** Mechanical trapping, using snap traps, is the primary method of control at this time. This method is moderately effective at controlling populations. Both trapping and baiting have proven very labor intensive.
- **Mice / Rats:** At this time, traps are the primary way of controlling this population. Traps have been found to be effective depending on population size and location and available food sources. Positive public perception seems to far outweigh the costs of using traps. Traps have also shown themselves to be very effective in controlling rodents on downtown State Street and at Coast Village Road.
- **Termites:** Building Maintenance now uses heat treatments to control drywood termites where appropriate. Heat was found to be equally effective as pesticides on smaller buildings with drywood termites. However, costs are 50% higher at this time, and heat is not effective on large structures or with subterranean termites.

VIII. PROPOSED CHANGES TO PEST MANAGEMENT PRACTICES

Alternative Practices Proposed for 2013

The upcoming year will pose new challenges due to the financial climate. Budget considerations and the reduction of staff may require a change in service levels and aesthetic expectations or a greater reliance on more cost effective traditional pesticides. Departments will continue to seek "least toxic" alternatives that provide higher benefit to cost ratios. Departments will also continue to use alternatives found effective in the past six years unless more cost-effective alternatives are found. Departments propose the following for 2013:

- The Parks Division will continue to implement the PHAER Zone system of Integrated Pest Management and continue seeking out training and collaborative opportunities with other agencies and IPM professionals. Parks will continue experimenting with sheet mulching to control weeds.
- The Golf Division will continue to experiment with new Green materials as they come forward.
- In the coming year, the Airport Department will again seek exemptions for fumitoxin to control rodents on the airfield, and a product to treat drywood termites in Airport buildings. In addition, the Airport Department may request an exemption for application of Roundup, in a PHAER green zone, to remove existing turf as part of a project to install drought tolerant landscape. Alternative effort hours are expected to remain static.

IX. CONCLUSION

Overall, the City increased its use of pesticides in 2013. There was an increase in Yellow materials of 47.7%. There was an increase in Green materials of 276.7%, due primarily to mosquito control at the Airport. Red materials rose by 84.5% primarily due to an unusually warm year, prompting fungus outbreaks at the Golf Course.

During these times of reduced budgets, it is important for City staff to find cost effective, low risk, viable alternatives so that pesticide hazards may be reduced further and the overall efficiency of IPM practices may increase. Additionally, changes in maintenance standards and expectations will be necessary if funds are not available for the increased labor of alternative practices.

Also critical to reducing pesticide hazards in the City of Santa Barbara is the continuation of community outreach and public education. Because of this community outreach, the public will become more aware of the City's greater reliance upon low risk IPM alternatives.

X. ATTACHMENTS

ATTACHMENT A: APPROVED MATERIALS LIST

The pesticides listed on the Approved Materials List are categorized according to the pesticide screening protocol in the PHAER Zone system.

Product Name	Active Ingredient	ZONE	Type
Acelepryn	Chlorantraniliprole	Green	Insecticide
Advance Ant Bait	Orthoboric Acid	Green	Insecticide
Advion Roach Stations (enclosed)	Indoxacarb	Green*	Insecticide
AllDown	citric acid, acetic acid, garlic	Green	Herbicide
Any brand name	Orthoboric Acid ant bait station	Green	Insecticide
Avert Cockroach Bait Station	Abamectin B1 0.05%	Green	Insecticide
Avert Cockroach Gel Bait	Abamectin B1 0.05%	Green	Insecticide
Bactimos Pellets	Bt	Green	Insecticide
Bactimos Wettable	Bt	Green	Insecticide
Bio-Weed	corn gluten	Green	Herbicide
Borid Turbo	Orthoboric Acid	Green	Insecticide
BurnOut 2	clove oil	Green	Herbicide
Cease Biofungicide	B. subtilis	Green	Fungicide
Cinnamite	cinnamaldehyde	Green	Insect/Fung
Conserve	spinosad	Green	Insecticide
Dipel Flowable	Bt	Green	Insecticide
Drax Ant Kill PF	Orthoboric Acid	Green	Insecticide
EcoExempt	Wintergreen Oil	Green	Herbicide
EcoExempt D	2-Phenethyl propionate / Euginol	Green	Insecticide
Embark	mefluidide	Green	Growth Regulator
GreenErgy	Citric, Acetic Acid	Green	Herbicide
Kaligreen	potassium bicarbonate	Green	Fungicide
Matran (EPA Registration Exempt)	clove oil	Green	Herbicide
Natura Weed-A-Tak	clove oil	Green	Herbicide
Niban	Isoboric Acid 5%	Green	Insecticide
Safer Soap	potassium salts of fatty acids	Green	Insecticide
Sluggo	iron phosphate	Green	Other
Summit BTI Briquets	Bt	Green	Insecticide
Teknar HP-D	Bti	Green	Insecticide
Terro II	Orthoboric Acid	Green	Insecticide
Vectobac G	Btk	Green	Insecticide
VectoLex CG	bacillus sphaericus	Green	Insecticide
Victor Wasp and Hornet Killer	Mint Oil 8% & Sodium Lauryl Sulfate 1%	Green	Insecticide
Advion Ant Arena	Indoxacarb	Yellow	Insecticide

Product Name	Active Ingredient	ZONE	Type
Advion Roach Gel	Indoxacarb	Yellow	Insecticide
Advion Insect Granules	Indoxacarb	Yellow	Insecticide
Agnique MMF	POE Isoocatadecanol	Yellow	Insecticide
Aliette	fosetyl aluminum	Yellow	Fungicide
Altosid Briquettes	methoprene	Yellow	Other
Altosid Liquid	methoprene	Yellow	Other
Altosid Pellets	methoprene	Yellow	Other
Altosid XR-B	methoprene	Yellow	Other
Aquamaster-Rodeo	glyphosate	Yellow	Herbicide
Avid	abamectin	Yellow	Miticide/Insecticide
Ditrac	Diphacinone	Yellow	Rodenticide
Dormant	petroleum oil	Yellow	Insecticide
Green Light	Neem oil	Yellow	Insecticide/Fungicide
Kop-R-Spray	Copper Oil	Yellow	Fungicide
M-PEDE	potassium salts of fatty acids	Yellow	Insecticide
Omni Oil	Mineral Oil	Yellow	Fungicide
Prostar 70 WP	flutolanil	Yellow	Fungicide
Rose Defense	Neem oil	Yellow	Insect/Fung
Roundup Pro	glyphosate	Yellow	Herbicide
Roundup PROMAX	glyphosate	Yellow	Herbicide
Safticide Oil	petroleum oil	Yellow	Insecticide
Stylet Oil	Petroleum distillates	Yellow	Insecticide
Sulf-R-Spray	Parafin oil, sulfur	Yellow	Fungicide
Superior Spray Oil	petroleum distillates	Yellow	Insecticide
Surflan	oryzalin	Yellow	Herbicide
Surflan AS	oryzalin	Yellow	Herbicide
Termidor SC	Fipronil	Yellow	Insecticide
Triact	Neem oil	Yellow	Insecticide/Fungicide
Trilogy	Neem oil	Yellow	Insecticide/Fungicide
Wasp-Freeze	allethrin	Yellow	Insecticide
Wilco Ground Squirrel Bait	diphacinone	Yellow	Other
XL 2G	benefin; oryzalin	Yellow	Herbicide
Banner-maxx	Propiconazole	S.C.	Fungicide
Bayleton	triadimafon triazole	S. C.	Fungicide
Daconil	Chlorothalonil	S.C.	Fungicide
Fumitoxin	Aluminum phosphide	S. C.	Rodenticide
Heritage	Azoxystrobin	S.C.	Fungicide
Manage	halosulfuron methyl	S. C.	Herbicide
Medallion	fludioxonil	S. C.	Fungicide
Quick Pro	glyphosate/diquat	S. C.	Herbicide
Reward	diquat dibromide	S. C.	Herbicide

Product Name	Active Ingredient	ZONE	Type
Rubigan	fenarimol	S. C.	Fungicide
Rubigan EC	fenarimol	S. C.	Fungicide
Subdue	metalaxyl	S. C.	Fungicide
Trimmit 2SC	Paclobutrazol	S.C.	Growth Regulator
Zp Rode	zinc phosphide	S. C.	Rodenticide

* By decision of the Citizen IPM Advisory Committee, chemicals that may be classified normally as Yellow materials may be classified as Green materials if they are entirely enclosed in factory sealed bait stations.
